You will find the best solution for your specific RTM process needs with Sika Advanced Resins Biresin® CR resin systems.

- With optimized process conditions, cycle times < 3 minutes are possible
- High Tg values up to 180 °C with Biresin® CR170
- Class A surfaces e.g. with Biresin® CR135
- Some systems are suited to the cathodic dip coating process
- Professional process support by Sika Advanced Resins experts
- The development of customer specific solutions are possible
HIGH PERFORMANCE EPOXY SYSTEMS FOR ESPECIALLY...

...SHORT CYCLE TIMES

Biresin® CR170 (A) with Biresin® CH135-4 (B)
- Tg ~ 150 °C
- Well suited for isothermal RTM processes (e.g. at 110 °C)
- Cycle time < 6 min*

Biresin® CR170 (A) with Biresin® CH150-3 (B)
- Tg ~ 140 °C
- Well suited for variothermal RTM processes
- Cycle time < 3 min*

...GOOD SURFACE FINISH

Biresin® CR135 (A) with Biresin® CH135-4 (B)
- Tg ~ 150 °C
- Cycle time < 15 min*

Biresin® CR120 (A) with Biresin® CH120-6 (B)
- Tg ~ 115 °C
- Cycle time < 15 min*

...HIGH Tg VALUES

Biresin® CR170 (A) with Biresin® CH170-3 (B)
- Tg ~ 170 °C
- Processing temperature of ~60 °C to reduce the viscosity

Biresin® CR170 (A) with Biresin® CH150-3 (B)
- Tg ~ 140 °C
- Well suited for variothermal RTM processes
- Cycle time < 3 min*

...HIGH IMPACT RESISTANCE

Biresin® CR165 (A) with Biresin® CH135-4 (B)
- Tg ~ 160 °C
- High impact resistance, at the same time with a high Tg
- Particular for components where a high impact resistance is needed, e.g. for carbon fibre reinforced wheels

Biresin® CR120 (A) with Biresin® CH120-6 (B)
- Tg ~ 115 °C
- Cycle time < 15 min*

* with optimized process conditions

Our most current General Sales Conditions shall apply.
